

Is AI worthwhile for this process?

Evaluate a specific workflow in 5 minutes. Rate each criterion from 1 to 5 points, then add them up.

Which process is this about?

Who does what, how often, and what is annoying about it?

Scoring

Criterion	1	2	3	4	5
1. Frequency <i>1 = rare (monthly or less often)</i> <i>5 = daily or several times per week</i>	☐	☐	☐	☐	☐
2. Manual effort <i>1 = minimal (less than 1 hour per week)</i> <i>5 = very high (more than 5 hours per week)</i>	☐	☐	☐	☐	☐
3. Process clarity <i>1 = chaotic, barely documented, many exceptions</i> <i>5 = stable, clear, exceptions are known and manageable</i>	☐	☐	☐	☐	☐
4. Data situation <i>1 = information is missing or only in people's heads</i> <i>5 = all necessary data is digital and accessible</i>	☐	☐	☐	☐	☐
5. Rule clarity <i>1 = much human judgment needed, hard to capture in rules</i> <i>5 = clear rules, little gray area, easy to automate</i>	☐	☐	☐	☐	☐
6. Error tolerance <i>1 = serious consequences if errors occur (legal, financial)</i> <i>5 = errors are easy to detect and correct</i>	☐	☐	☐	☐	☐

7. Quick Win

1 = first results only after many months

5 = first results visible within a few weeks

Total points (max. 35)

_____ / 35

Evaluation

28 to 35

Points

Very good use case. Start.

The prerequisites are right. A first pilot makes sense.

20 to 27

Points

Feasible, but with caution.

Clarify criteria with 1 or 2 points first before you start.

under 20

Points

Not ready yet.

Too many prerequisites are missing. Which criteria have 1 or 2 points? Start there.

What to pay special attention to:

Criterion 3 under 2 points

Document and stabilize the process first, then automate it.

Criterion 4 under 2 points

Clarify the data situation first. AI can only work with data that actually exists.

Criterion 6 under 2 points

Plan Human-in-the-Loop as mandatory. No step without human approval.
